Dear all,

At 20:20 on Oct. 29th, our team held a meeting on Google Meet as agreed upon. Participants included Eric, Kevin, Moayad, Tianyi, Terry, and Steven.

In this meeting, we discussed the TDD assignment and settled on doing two features with each having a BDD design lead, a Backend TDD tester, and a Controller/Request TDD tester. The specific features and roles each team member is responsible for are listed in the same design document in our shared google drive as the last BDD assignment..

Next step: Create one branch for each feature and perform your respective roles as specified in the document.

Please feel free to add or correct any information.

Sincerely,  
Tianyi Xu
